

Prevention

Short Term

Ask homeowners to contribute toward maintenance of the golf course.

Example

\$25 per month by every property owner will assume proper golf course care and financial stability so the club can continue to have a competitive product (membership) to sell and the environment improves.

Important

This amount is only a fraction of what the cost would be to each property owner if closure occurs.

Long Term

Recommendations form a joint group to aggressively pursue formulation of a single organization with control over both functions (maybe the water district also) so that property owners have a level of control and this type of situation will not occur again.
